

MEASUREMENT TEMPLATE FOR INSIDE RECESS WINDOW FITTING

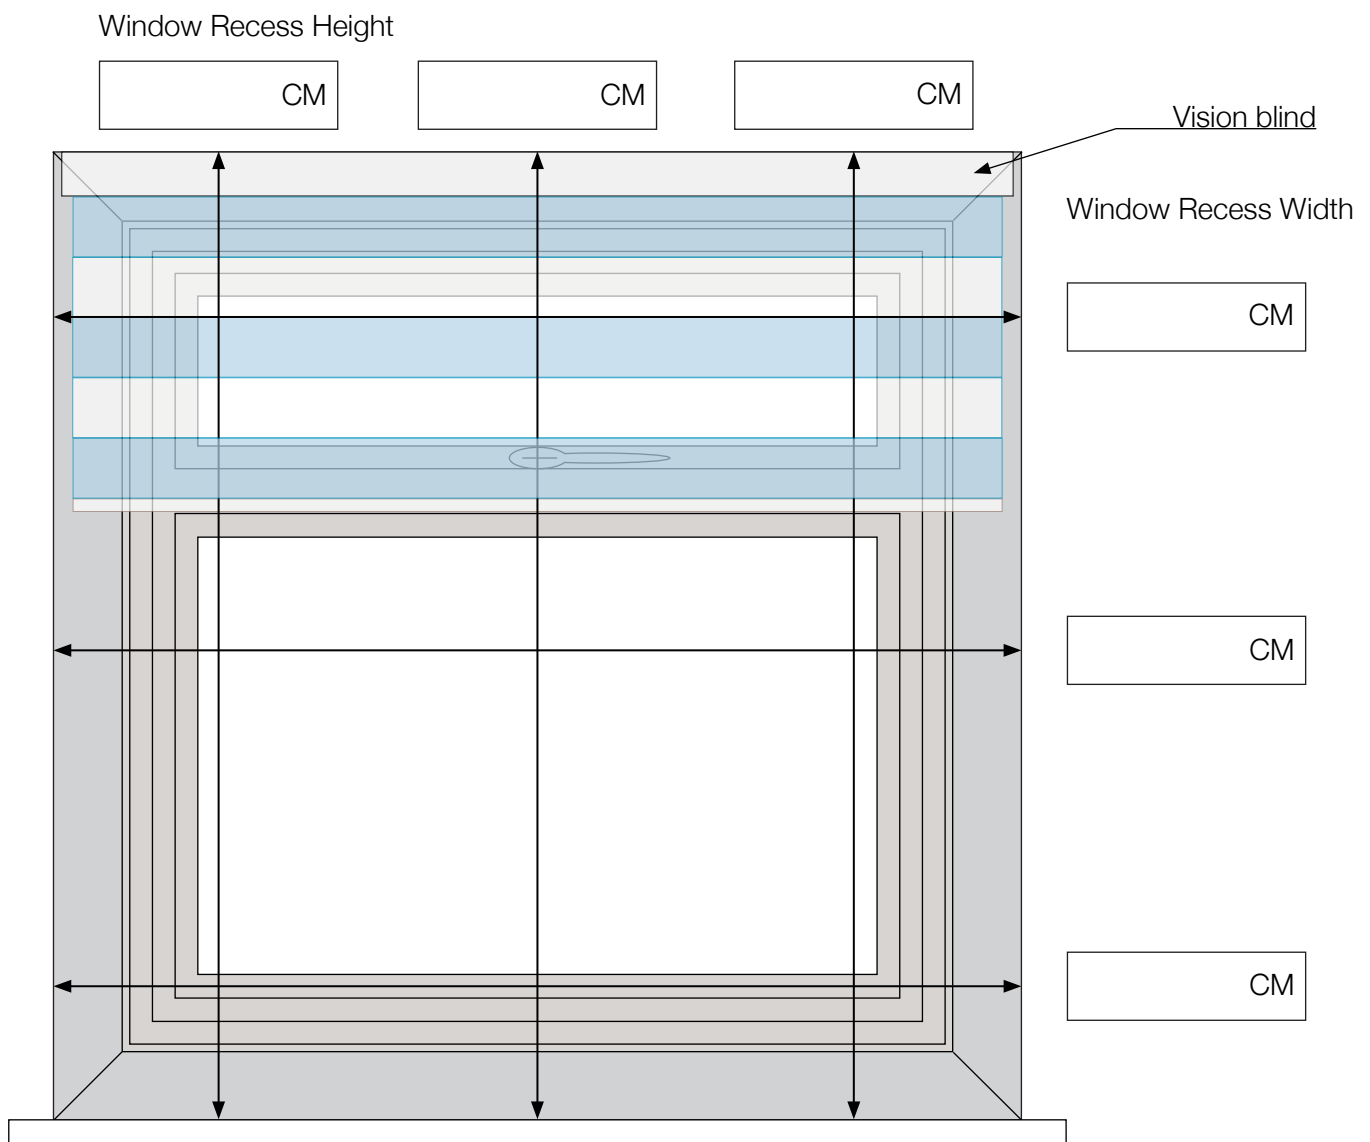

Fitting a Motorised Vision Blind *inside* the window recess

This template is to help you record the measurements for your motorised Vision blind when fitting within the window recess. Please download the '**Outside Recess Window Fitting**' template if you plan to fit your motorised Vision blind to the outside of the window.

Using a metal tape measure, measure the distances as illustrated in the diagram below and make a note of the measurement in the boxes provided. Make sure that you take into consideration any window fixtures such as handles or locks or any other obstruction when measuring for your blind.

Headral Profile

We will deduct **10mm** from your width measurement when ordering a motorised Vision blind system to be fitted inside the window recess. This is to ensure the headrail profile fits comfortably within the window recess area (there will be a 5mm gap at either side of the headrail profile when fitted).

Record all measurements in CM and use the shortest of the three measurements when ordering your motorised Vision blind.
