

## MEASUREMENT TEMPLATE FOR OUTSIDE RECESS WINDOW FITTING

Fitting a Motorised Vision Blind **outside** the window recess.

This template is to help you record the measurements for your motorised Vision blind when fitting outside the window recess. Please download the '**Inside Recess Window Fitting**' template if you plan to fit your motorised Vision blind inside the window recess.

Using a metal tape measure, measure the distances as illustrated in the diagram below and make a note of the measurement in the boxes provided. Make sure that you take into consideration any window fixtures such as handles or locks or any other obstruction when measuring.

**N.B. When recording the measurement for you Vision blind width, please take into account that the fabric panel is approximately 3.6cm less than the headrail width. This is due to the space required for the motor head and components at each side of the blind.**

So if your recorded measurement is 120cm, your blind will be fabricated so that the headrail width is 120cm once fitted, but the fabric width will be 116.4cm (see the diagram below with the blind in situ as a guide). Please ensure that your recorded measurement takes this into account when submitting your order.
